TORGIMA Live Production E2E Audit Report

Audit date: 2026-06-07

Mode: Production verification and live failure tracing

Architecture: Cloudflare Pages (torgima.com) + Cloudflare Worker (api.torgima.com) + Supabase + Resend + Anthropic

---

Executive Summary

Verdict: Production is NOT ready.

The Worker is deployed and routing works, but **Cloudflare Worker secrets are not bound**. Every database-backed flow fails before business logic runs. This is an infrastructure configuration gap, not an application routing bug.

Root cause: Worker `torgima` is missing `DATABASE_URL`, `ANTHROPIC_API_KEY`, `RESEND_API_KEY`, `INTERNAL_AUTH_SECRET`, and related secrets. Auth fails at the first database query; all downstream flows (validation, launch, dashboard) are blocked.

Phase 1 — Static Production Config Verification

```
Check | Result | Evidence
Frontend API base = https://api.torgima.com | PASS | Live bundle: const mS="https://api.torgima.com"
No Railway/Vercel/localhost/workers.dev as API target | PASS (API) | Bundle uses api.torgima.com only for fetch origin
Stale user-facing copy mentions Railway | FAIL (cosmetic) | Deployed login error: "Check Railway is running..." — Pages build behind repo
VITE_API_BASE_URL on Pages | PASS (inferred) | Value baked into production JS
Worker runtime vars | PARTIAL | NODE_ENV, TORGIMA_RUNTIME, APP_URL = present
Worker secrets | FAIL | See env matrix below
```

Worker Environment / Secrets (present/missing only)

```
Variable | Status
DATABASE_URL | missing
SUPABASE_URL | missing
SUPABASE_ANON_KEY | missing
SUPABASE_SERVICE_ROLE_KEY | missing
ANTHROPIC_API_KEY | missing
RESEND_API_KEY | missing
EMAIL_FROM | missing
INTERNAL_AUTH_SECRET | missing
NOTIFICATION_UNSUBSCRIBE_SECRET | missing
NODE_ENV=production | present
TORGIMA_RUNTIME=cloudflare | present
APP_URL=https://torgima.com | present
FRONTEND_URL=https://torgima.com | present (wrangler vars)
KV SESSIONS binding | bound (KV read/write OK)
```

Phase 2 — Live Endpoint Tests

```
Endpoint | HTTP | Summary | Result | Failing Stage | Request ID
GET /health | 200 | ok:true, service:torgima-api | PASS | — | —
```

GET /api/health | 503 | status:degraded, database/bhudhi/signals error | FAIL | Env + DB + AI + email | —

GET /api/auth/session | 200 | authenticated:false | PASS | Unauthenticated path OK | c2426cee-fd39-422c-a908-868b57cbf526

GET /api/debug/cloudflare-env | 200 | Secrets listed missing | FAIL | Secret binding | fef85b0e-ef8b-4736-8fa8-460418bdcd96

GET /api/debug/blueprint-launch-health | 200 | database/anthropic/internal_auth missing | BLOCKED | Prerequisites | e18e7e4e-d730-4616-8fb5-e783b61a12a8

GET /api/debug/routes | 200 | Launch route registered | PASS | — | 70c62e0c-d635-4181-ab18-ce6f2fe48377

POST /api/auth/send-magic-link | 503 | Database not configured on Worker | FAIL | First DB touch in auth | 94c9966f-b6bf-4c22-bb4a-8793e5f8f041

POST /api/v1/validations/:id/launch | 401 | Authentication required | BLOCKED | No session | —

GET /api/orders/current | 401 | Route exists, needs session | BLOCKED | Auth | 4fc73cf2-34d9-4c5c-95af-8f498a55057c

GET /api/v1/orders/today | 404 | Route not registered | N/A | Wrong path — use /api/orders/current | —

GET /api/health/schema | 500 | INTERNAL_ERROR (underlying: no DB) | FAIL | verifySchema cannot query Postgres | 536c33dc-366d-43c2-b11a-7bbe94a8f218

/api/health Dependency Breakdown

Dependency | Status | Exact Error

DATABASE_URL | FAIL | DATABASE_URL is not set

Database connection | FAIL | [DB] DATABASE_URL is not set

Anthropic / Bhudhi | FAIL | ANTHROPIC_API_KEY not set

Resend | FAIL | RESEND_API_KEY not set

KV sessions | PASS | KV read/write succeeded

Worker runtime | PASS | cloudflare-workers

Migrations / tables | UNKNOWN | Cannot reach DB

Supabase RLS | UNKNOWN | Blocked by missing DATABASE_URL

Phase 3 — Live Frontend Test

Check | Result

https://torgima.com loads | PASS (HTTP 200, Torgima SPA)

https://www.torgima.com loads | PASS (HTTP 200, same bundle)

No CF 1034/404/500 on shell | PASS

Static assets (/assets/index-Cb7Ne4i2.js) | PASS (HTTP 200)

Frontend targets https://api.torgima.com | PASS

Requests to Railway/Vercel/localhost API | PASS (none in bundle for API host)

Browser console / network tab | Not instrumented — HTTP audit only

Phase 3 overall: PASS (shell + routing) / BLOCKED (functional API dependency)

Phase 4 — Auth Flow Verification

Request Trace

Browser (torgima.com/login)

!’ POST https://api.torgima.com/api/auth/send-magic-link

!’ Worker: auth.ts !’ handleSendMagicLink()

!’ AuthService.sendMagicLink() line 37: db.select().from(users)

!’ lib/db getDb() throws [DB] DATABASE_URL is not set

!’ utils.ts mapInfrastructureError !’ 503 SERVICE_UNAVAILABLE

Step | Page / Route | API | Worker Function | DB Tables | Env Required | Live Result

1. Signup page | /signup | — | — | — | — | PASS (SPA serves)

```
2. Login page  |  /login  |  –  |  –  |  –  |  –  |  PASS
3. Magic link request  |  login.tsx !’ sendMagicLink()  |  POST /api/auth/send-magic-link  |  AuthService.sendMagicLink  |  users, magic_link_tokens, sessions  |  DATABASE_URL, RESEND, EMAIL_FROM  |  FAIL 503
4. Resend call  |  –  |  –  |  sendEmail() in resend.ts  |  –  |  RESEND_API_KEY  |  Never reached
5. Email generated  |  –  |  –  |  –  |  –  |  –  |  BLOCKED
6. Auth callback  |  /auth/callback  |  GET/POST /api/auth/verify  |  completeMagicLinkVerify  |  sessions, KV  |  DATABASE_URL, KV  |  BLOCKED
7. Session cookie  |  –  |  –  |  res.cookie(SESSION_COOKIE_NAME)  |  sessions + KV  |  CORS + cookie  |  BLOCKED
8. Session check  |  –  |  GET /api/auth/session  |  requireAuth(OPTIONAL_SESSION)  |  sessions / KV  |  –  |  PASS logged-out only
```

Worker log (magic link): Infrastructure error in route handler — requestId 94c9966f-b6bf-4c22-bb4a-8793e5f8f041

Exact fix: Bind DATABASE_URL (Supabase pooler URL) on Worker torgima, then RESEND_API_KEY + EMAIL_FROM, redeploy.

Phase 5 — Validation Flow Verification

```
Step  |  Frontend  |  API  |  Handler  |  Engine  |  DB Tables  |  Env  |  Live Result
Goal input  |  Onboarding / Erector  |  POST /api/v1/validation/run  |  validation.ts  |  Erector engine  |  validations, blueprints  |  Auth + DB + AI  |  BLOCKED 401
Purpose/context/timeframe  |  Same flow  |  Same  |  Same  |  Same  |  Same  |  Same  |  BLOCKED
Submit validation  |  Erector run UI  |  POST /api/v1/validation/run  |  Erector pipeline  |  Bhudhi + validation  |  validations writes  |  ANTHROPIC_API_KEY  |  BLOCKED
Engine runs  |  –  |  –  |  –  |  Anthropic calls  |  –  |  ANTHROPIC_API_KEY  |  BLOCKED
Result saved  |  –  |  –  |  –  |  –  |  validations  |  DATABASE_URL  |  BLOCKED
Results page  |  /validation-results  |  GET /api/v1/validations/:id/results  |  validation.ts  |  –  |  validations read  |  Auth + DB  |  BLOCKED
```

First failure point: Auth (Phase 4). Validation cannot start without a session.

Phase 6 — Blueprint Launch Flow (Critical Path)

Frontend Chain

1. Button: BlueprintLaunchInputScreen !’ onLaunch in select-blueprint.tsx
2. Function: selectTierAndLaunch() in torgima-api.ts
3. Attempts (in order):

- POST /api/blueprints/select-tier
- POST /api/onboarding/select-blueprint
- POST /api/v1/onboarding/select-blueprint
- Fallback: POST /api/v1/validations/:id/launch

Canonical Launch Endpoint

POST /api/v1/validations/:id/launch

Body: validationId, blueprintId, selectedTier, selectedPath, selected_direction, etc.

Auth: session cookie required

Handler: validation.ts !’ validationLaunchHandler !’ ValidationLaunchService.launch()

```
Check  |  Live Result
Route registered  |  PASS
```

```
Route reachable  |  PASS (401 without auth — expected)
validation_id sent  |  Yes — URL param :id + body fields
selected_direction / path / tier  |  Yes — validationLaunchBodySchema
Auth user present  |  FAIL today — no login possible
First DB operation (with auth)  |  ValidationService.findValidationForBlueprint() — read validations
First insert chain  |  BlueprintTierLaunchService !’ plans/phases/projects/actions/orders
Timeout risk  |  Unknown — never reached
ctx.waitUntil needed  |  Not testable until DB + auth work
```

Predicted failure (once secrets fixed): If migrations not applied !’ schema errors. If Anthropic missing !’ Erector fails before launch.

Current blocker: Set Worker secrets !’ complete auth !’ run validation !’ test launch.

Phase 7 — Dashboard / Orders / Signals Verification

```
Feature  |  Frontend Route  |  Real API Path  |  Live Status
Dashboard  |  /dashboard  |  State/dashboard endpoints  |  BLOCKED (no session)
Daily orders  |  Dashboard  |  GET /api/orders/current  |  BLOCKED (401)
Signals  |  /signals  |  GET /api/bhudhi/signals?blueprintId=  |  BLOCKED
Project  |  /project  |  State/projection endpoints  |  BLOCKED
Feedback  |  Task UI  |  POST /api/orders/:id/feedback  |  BLOCKED
Bhudhi panel  |  /bhudhi  |  /api/bhudhi/*  |  BLOCKED (ANTHROPIC missing)
```

Phase 8 — Cloudflare Worker Logs (last 2h)

```
Trigger  |  Error  |  Root Cause  |  Fix
Cron * * * * *  |  [Cron] Inline handler failed  |  DB/schedulers need DATABASE_URL  |  Bind DB secret
Cron */10 * * * *  |  [IntegrityChecker] Check failed  |  Same  |  Bind DB secret
Every fetch boot  |  RESEND_API_KEY not set  |  Secret missing  |  wrangler secret put RESEND_API_KEY
POST /api/auth/send-magic-link  |  Infrastructure error in route handler  |  DATABASE_URL not set at AuthService.sendMagicLink:37  |  Bind DATABASE_URL
POST .../launch  |  Authentication required  |  Expected without cookie  |  Fix auth first
```

No INTERNAL_ERROR masking on magic link — API returns explicit 503. /api/health/schema masks as INTERNAL_ERROR; underlying cause is missing DB.

Phase 9 — Database Verification

Cannot verify table existence from production — Worker has no DATABASE_URL.

```
Table  |  Exists  |  Readable  |  Writable  |  RLS Issue  |  Migration Missing
users  |  unknown  |  no  |  no  |  unknown  |  unknown
sessions  |  unknown  |  no  |  no  |  unknown  |  unknown
magic_link_tokens  |  unknown  |  no  |  no  |  unknown  |  unknown
validations  |  unknown  |  no  |  no  |  unknown  |  unknown
blueprints  |  unknown  |  no  |  no  |  unknown  |  unknown
plans / programs / phases / projects / actions  |  unknown  |  no  |  no  |  unknown  |  unknown
orders  |  unknown  |  no  |  no  |  unknown  |  unknown
signal_snapshots / signals  |  unknown  |  no  |  no  |  unknown  |  unknown
feedback  |  unknown  |  no  |  no  |  unknown  |  unknown
events  |  unknown  |  no  |  no  |  unknown  |  unknown
```

After secrets set: GET /api/health (all checks ok) + GET /api/health/schema. Run pnpm db:migrate + pnpm db:apply-manual if schema check fails.

Phase 10 — Production Readiness Matrix

#	Feature	Status	Frontend	API	Worker Function	DB Tables	Env Vars	Logs	Failure Point	Exact Fix
1	Frontend loads	PASS	/	—	—	—	—	yes	—	—
2	API health (shallow)	PASS	—	GET /health	worker.ts	—	—	yes	—	—
3	API health (deep)	FAIL	—	GET /api/health	health.ts	all	DATABASE_URL, ANTHROPIC, RESEND	yes	Env not bound	Set CF Worker secrets
4	Magic link signup	FAIL	/signup, /login	POST /api/auth/send-magic-link	AuthService.sendMagicLink	users	DATABASE_URL, RESEND, EMAIL_FROM	yes	DB query line 37	Bind secrets
5	Login	FAIL	/login	same	same	same	same	yes	same	same
6	Session creation	BLOCKED	/auth/callback	GET /api/auth/verify	verifyMagicLink	sessions, KV	DATABASE_URL	yes	Upstream auth	Fix auth first
7	Goal creation	BLOCKED	Erector onboarding	validation run routes	validation.ts	validations	Auth + DB + AI	—	No session	Fix auth
8	Validation generation	BLOCKED	Erector	POST /api/v1/validation/run	Erector engine	validations	ANTHROPIC_API_KEY	—	Auth + AI	Secrets + auth
9	Validation results	BLOCKED	/validation-results	GET .../results	validation.ts	validations	Auth + DB	—	Auth	Fix auth
10	Blueprint creation	BLOCKED	onboarding	various	BlueprintService	blueprints	Auth + DB	—	Auth	Fix auth
11	Blueprint launch	BLOCKED	select-blueprint.tsx	POST /api/v1/validations/:id/launch	ValidationLaunchService.launch	validations!’orders	Auth + DB + AI	yes	Auth (401)	Secrets !’ auth !’ retest
12	Dashboard	BLOCKED	/dashboard	dashboard/state APIs	multiple	many	Auth + DB	—	Auth	Fix auth
13	Daily orders	BLOCKED	dashboard	GET /api/orders/current	orders.ts	orders	Auth + DB	yes	401	Fix auth
14	Signals	BLOCKED	/signals	/api/bhudhi/signals	bhudhi routes	signal_snapshots	Auth + DB + AI	—	Auth + AI	Secrets
15	Feedback	BLOCKED	task UI	POST /api/orders/:id/feedback	feedback flow	feedback	Auth + DB	—	Auth	Fix auth
16	Bhudhi	BLOCKED	/bhudhi	/api/bhudhi/*	Bhudhi controllers	many	ANTHROPIC_API_KEY	yes	AI key missing	Bind Anthropic
17	Notifications	BLOCKED	settings	notification routes	—	—	RESEND	yes	Resend missing	Bind Resend
18	Team system	BLOCKED	—	team routes	—	—	Auth + DB	—	Auth	Fix auth

Root Cause Chain

1. User opens torgima.com !’ PASS (Pages serves SPA)
2. User submits email on /login
3. POST api.torgima.com/api/auth/send-magic-link
4. DATABASE_URL bound? NO (current state)
5. 503 at AuthService.sendMagicLink db.select(users)
6. All downstream flows blocked
7. After fix: user row + magic_link_tokens !’ Resend email !’ auth callback !’ session !’ validation !’ launch !’ dashboard

Activation Checklist (Infrastructure Only)

1. Cloudflare Dashboard !’ Workers !’ torgima !’ Settings !’ Variables and Secrets — add all secrets from Phase 1 matrix.
2. Optional: Hyperdrive binding for Supabase pooling.
3. Redeploy Worker (or push to main if CI deploy is wired).

4. Verify GET /api/health !’ status healthy; POST /api/auth/send-magic-link !’ 200 sent:true.
5. Run migrations if /api/health/schema still fails after DB bound.
6. Redeploy Pages for updated login error copy (optional cosmetic).

Production Ready Criteria

```
Criterion  |  Met?
https://torgima.com loads  |  YES
https://api.torgima.com/health returns ok  |  YES
Login works  |  NO
Session persists  |  NO
Validation works  |  NO
Launch blueprint works  |  NO
Dashboard / orders load  |  NO
```

Production ready: NO

Single blocking dependency: Cloudflare Worker torgima does not have production secrets bound.

Generated from live production HTTP tests and Cloudflare Worker observability logs. Audit performed 2026-06-07.
