# TORGIMA Production Readiness Report

*Generated: 2026-06-17T11:35:00.000Z*
Commit: 45f33896611aa1543f58618c26c9eefef3a255b6 — fix(system): align TORGIMA lifecycle engines
Branch: main

## Executive summary

Verdict: CONDITIONAL — Worker and frontend are live post-push; full production verification scripts did not pass from this machine

### Blockers

• Local production database credentials in .env.production.local cannot authenticate to Supabase (28P01 / ETIMEDOUT)
• Local INTERNAL_AUTH_SECRET does not match deployed Worker secret — debug probes return 403
• bhudhi:prod:verify flags completeSystemDiagnostic.ts for direct Anthropic usage (non-Bhudhi adapter path)
• New SQL migrations (20260617023300, 20260617024400) require manual apply to production per CONTRIBUTING.md

## Pre-commit verification (local)

Check | Result
| --- | --- |
git_status | PASS
typecheck | PASS
build | PASS
db_verify_runtime | PASS
events_verify | PASS
bhudhi_smoke | PASS
lifecycle_e2e | PASS
alignment_report_md | PASS
alignment_report_json | PASS
alignment_report_pdf | PASS

## Deployment

Probe | Result | Detail
| --- | --- | --- |
API /health | PASS | https://api.torgima.com/health ’ ok:true, runtime:cloudflare-workers
Frontend torgima.com | PASS | https://torgima.com HTTP 200

## Production verification

Check | Result | Notes
| --- | --- | --- |
db_prod_verify_runtime | FAIL | password authentication failed for user postgres (local .env.production.local DB credentials)
events_prod_verify | FAIL | events-cli verify failed — production DATABASE_URL unreachable from this host
bhudhi_prod_verify | FAIL | 4/6 checks failed: missing local ANTHROPIC_API_KEY, DB auth, Anthropic leak audit (diagnostic file), /api/debug/bhudhi-runtime HTTP 403
test_prod_smoke | FAIL | DB connect ETIMEDOUT; API /health not reached in smoke run (failed before API probes)
api_health_direct | PASS | Independent curl probe after push
debug_db_target | BLOCKED | HTTP 403 — local INTERNAL_AUTH_SECRET does not match Cloudflare Worker secret
debug_bhudhi_runtime | BLOCKED | HTTP 403 — internal auth mismatch
